

# OPStreams

## Enterprise Resource Streaming to Remote Teams and Sites

OPStreams delivers low-latency, high-performance enterprise content streams to remote teams enabling off-site employees to view data and collaborate better. With curated streaming channels, organizations can manage content distribution while maintaining enterprise-grade security. As a fully browser-based solution, OPStreams eliminates proprietary hardware and supports air-gapped and online deployments, making it ideal for highly secure environments. Whether for operations centers, remote monitoring, or hybrid teams, OPStreams keeps users informed, connected, and in control—anytime, anywhere.

### Benefits

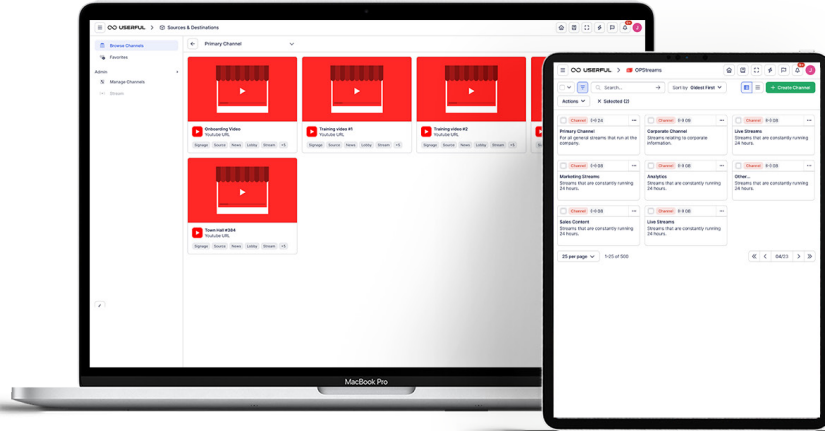

<b>Low-Latency Streaming</b>	Delivers near real-time streaming (5-8 sec latency) of dashboards, live feeds, and enterprise applications—ensuring teams can respond faster and make informed decisions.
<b>Browser-Based Access</b>	Enables near real-time content access from any location via a fully browser-based interface—eliminating proprietary hardware and simplifying remote operations.
<b>Content Control</b>	Organizations can manage content distribution with curated channels, ensuring that remote users only access the information relevant to them, enhancing security and engagement.
<b>Enterprise-Grade Security</b>	Supports Role-Based Access Control (RBAC) and can operate in both air-gapped and open environments, making it ideal for highly secure environments.
<b>Scalability</b>	Deploy and manage OPStreams across multiple sites with flexible configurations for any enterprise need.
<b>Integration with BrightSign Players</b>	Effortlessly stream content by pasting an OPStreams URL into a BrightSign player, enabling smooth playback and compatibility with the existing AV infrastructure.

### Features

<b>Stream Generation</b>	Convert any Useful source or canvas into a live stream, making it available to remote users in real time.
<b>Channels</b>	Incorporate existing live streams and on-demand videos into curated channels, ensuring seamless content distribution.
<b>Advanced Channel Management</b>	Create and manage HLS channels with multi-stream capability, RBAC-secured access, and air-gapped or online deployment for secure content distribution.

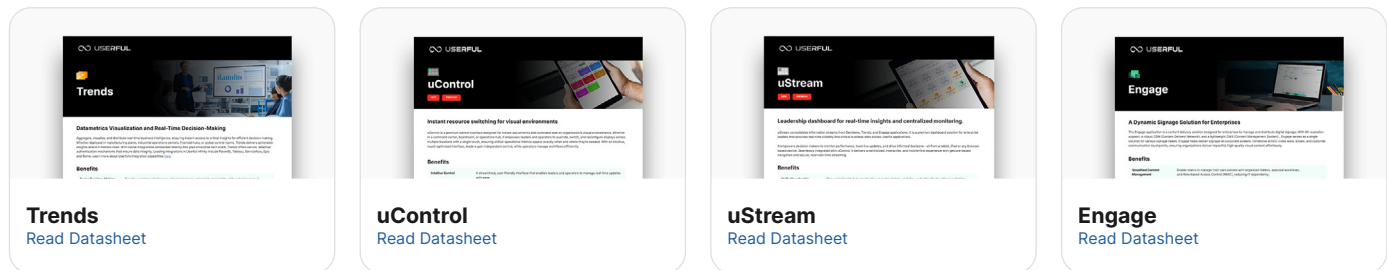

**Note:**

In **Userful Infinity Platform version 12.9.x and below**, OPStreams was referred to as **Remote**. Starting from **version 12.10.x and above**, the application is officially named **OPStreams**.

## Unlock the Full Potential of Userful's Platform

Explore how the Infinity Platform and its applications can redefine the management and connectivity of large-scale enterprise operations.

## About Userful

Userful™ is a leading provider of IT solutions for core enterprise operations and mission-critical environments serving IT organizations worldwide. Userful's unified software platform provides services and management through a complete suite of enterprise data visualization applications for comprehensive organizational and situational awareness and readiness for modernized operations. Userful harnesses the same unified platform to provide global manageability through a single-pane-of-glass.
